[Glossary](#)

**Search Plants**

We have a database of most of the worlds plants that you can search. Incorporate filters such as color, type, soil, light, PH, bloom season and more.

[Search](#)

**My Collections**

Create a collection for your garden, or make collections for parts of your garden; borders, herb, vegetable, terraces, pots, greenhouse. Manage your collections individually or altogether.

[My Collections](#)

**My Year**

Review your calendar for the year, select what jobs need to be done for each of your collections or for all your garden plants in one go.

[My Year](#)

**My Glossary**

Learn more about the conditions for your plants by reviewing our glossary. See the terms for hardiness, light, moisture, ph, soil types. This will help plan the types of collections you want and you can create the right environment in a collection.

[Glossary](#)

Home page is a landing page when users come onto the website. The home page is generic and describes the purpose and use of the site. It describes the key features;

1. Provides an ability for a user to search for plants for their garden;
2. Select plants that they want for their garden based on certain criteria: e.g. soil type, light, hardiness, region, edible, garden type
3. Create a database called 'My Collections' that will allow a user to store their plants into a collection or a number of collections.
4. The 'My Collections' section will allow 'CRUD' capability for the user.
4. Refer to a calendar of activities that will be required to maintain their garden through out the year.
5. The calendar will also provide details of plant activity in a user's garden i.e. growth, bloom, fruit, vegetable harvest, leaf drop.
6. The site will provide an ability for the user to contact us by sending a message via the 'Contact Us' section. A form will be provided for this. The details of that user can also be stored for active communication in the future.
7. A Glossary of Terms will be provided as an 'Appendix' page which describes key plant and gardening terms required to support growth in particular conditions such as 'hardiness' 'soil type', 'moisture', 'light'.
